Overview. The Flygt DP 3068 has a D impeller designed for solids handling. The D-Pump is used mainly to pump abrasive media or low volumes at high heads. This pump features a vortex impeller, which means that the flow is produced not by the impeller but by the rapidly rotating vortex the impeller creates. Consequently most of the particles in the liquid never come into actual contact with the impeller, thus minimising wear.

COMPACT WASTEWATER VORTEX PUMP. The Flygt D 3068 vortex pump is designed for high reliability. The impeller does not require adjustment and runs freely in the volute, providing free flow-through passage of solids and liquids. This completely eliminates the risk of clogging and low performance that results from faulty impeller adjustments and wear. Engineered for demanding environments, the Flygt D 3068 easily transports media for municipal sewage, industrial wastewater and a wide range of ...
