Marginal Costing and absorption costing are two cost management techniques used to allocate the cost to the products produced for their valuation.

Marginal costing allocates variable costs individually to the products and fixed costs are treated as period costs and deducted as an expense directly from the amount of contribution earned.

#### **Marginal Costing**

Absorption costing values inventory at the full production cost (including fixed production overheads) of a product. Inventory values using absorption costing are therefore greater than those calculated using marginal costing. Since inventory values are different, profits reported in the Income statement (I/S) will also be different.
