Because a shot is the defining action of a goal, shot data is key to any expected goals model. Expected goals (often abbreviated to xG) is one form of data analysis that soccer teams use and is something that is becoming increasingly popular amongst bettors. Expected goals stats are widely available online but they aren't always the same because different models are used to calculate them.

Expected goals model analysis | What is expected goals?

The statistical analysis of the results was conducted with the use of the non-parametric chi-square test. According to the results of the present study, the short pass (<10m) was the basic final attacking action in most of the goals (25%) while the long pass (>10m) comprised only 8.44% of all goals.
