BIOLOGY 12 - EXCRETION NOTES. Your cells are constantly carrying out chemical reactions to maintain homeostasis. Many of these chemical reactions produce wastes that must be removed from cells and from your body. Many of these wastes are small, water-soluble molecules that become dissolved in your blood along with other small molecules that are not wastes.

Mechanism of Excretion or Urine Formation. Urine formation is complete in three steps:  
1. Ultrafiltration (Glomerular filtration) It is the first process of urine formation. It takes place in the glomerulus. Richards (1942) explained, the dissolved substances are filtered out in to the Bowman's capsule due to the pressure of blood.
