Your bones are continuously changing — new bone is made and old bone is broken down. When you're young, your body makes new bone faster than it breaks down old bone, and your bone mass increases. Most people reach their peak bone mass around age 30. After that, bone remodeling continues, but you lose slightly more bone mass than you gain.

wishbone, a backbone and a funny bone - Reba McEntire image by: Culebra Chiropractic . Our 206 bones do more than just keep us standing, walking, and singing through life. They also protect our organs, harbor bone marrow, and store minerals such as phosphorus and calcium.

## **Bone and Joint**

In Ayurveda, the bones and joints are considered a site of vata in the body—meaning that they have a general affinity for vata, and are particularly prone to vata imbalances. This reality is only reinforced by the fact that the joints themselves are made up of a lot of empty space—which also corresponds with vata.
