On Earth, human activities are changing the natural greenhouse. Over the last century the burning of fossil fuels like coal and oil has increased the concentration of atmospheric carbon dioxide (CO 2). This happens because the coal or oil burning process combines carbon with oxygen in the air to make CO 2.

Are We Changing Planet Earth? This is our planet: planet Earth. It contains an astonishing variety of landscapes and climates. Since life began, around 4,000 million years ago, it has gone through extraordinary changes in its climate and in the species that live on it.

Are We Changing Planet Earth? - Wikipedia
The Earth's climate has changed throughout history. Just in the last 650,000 years there have been seven cycles of glacial advance and retreat, with the abrupt end of the last ice age about 11,700 years ago marking the beginning of the modern climate era — and of human civilization. Most of these climate changes are attributed to very small variations in Earth's orbit that change the amount of solar energy our planet receives.
