The analysis showed that city networks for global environmental governance are first and foremost innovative governance arrangements; albeit they also show continuities with the past. The more conventional aspects can both strengthen and weaken city networks for global environmental governance.

### **Cities, Networks, and Global Environmental Governance**

Hierarchical analysis of 256 cities in 118 countries suggests that the degree of cities' globalization, or their level of "global cityness," is positively associated with the cities' membership in the global networks. The level of individual cities' integration into the international economy and transportation grid is crucial for sharing ideas of global environmental responsibility.
