Decision Support Systems (DSS) Collecting data from one sensor, or many sensors, is only the first step in the overall decision-making process, which might be inspection, monitoring, tracking, etc. Often, many other components, such as databases, simulation models, and mathematical optimization, must be combined to form a fully developed decision support system (DSS).

**Decision Support Systems (DSS) | National Institute of ...**  
A decision support system (DSS) is a computerized program used to support determinations, judgments, and courses of action in an organization or a business. A DSS sifts through and analyzes massive...

**Decision Support System—DSS Definition**  
A decision support system is an information system that supports business or organizational decision-making activities. DSSs serve the management, operations and planning levels of an organization and help people make decisions about problems that may be rapidly changing and not easily specified in advance—i.e. unstructured and semi-structured decision problems. Decision support systems can be either fully computerized or human-powered, or a combination of both. While academics have ...
