1. Introduction. In this book, all marine domains extending seaward of the shelf break are considered as deep-sea. This domain represents 63.6 % of the Earth's surface (the ocean in its entirety covers 361×10 6 km 2 or 70.8% of the Earth's surface, including continental shelves). From a stricter geological point of view, the oceanic domain would begin at the boundary between the high-density ...

Deep-sea sediments. The ocean basin floor is everywhere covered by sediments of different types and origins. The only exception are the crests of the spreading centres where new ocean floor has not existed long enough to accumulate a sediment cover. Sediment thickness in the oceans averages about 450 metres (1,500 feet). The sediment cover in the Pacific basin ranges from 300 to 600 metres ...
