Time-discrete dynamic systems models have long been used in biology. Biologic computer simulations require careful consideration as to the level of detail necessary for a representative model, because unnecessary detail will lead to models so complex that detailed numerical study would become highly cumbersome or impossible.

Dynamic System Model - an overview | ScienceDirect Topics

This course focuses on dynamical modeling techniques used in Systems Biology research. These techniques are based on biological mechanisms, and simulations with these models generate predictions that can subsequently be tested experimentally. These testable predictions frequently provide novel insight into biological processes.

Next, to simulate TNF-induced dynamics of NF-κB and MAPK activations using the topology, we developed a dynamic model based on perturbation-response approach (Materials and Methods), using COPASI simulation platform [].Unlike common biochemical reaction models [24, 25], the perturbation-response approach does not require detailed knowledge of all signaling species and their reaction kinetics.
