The Enron Modbus protocol — developed by the Enron Corporation — has the ability to transmit operator and alarm event logs, as well as historical data through the ACM polling engine. As a high performance, flexible communication device, ACM can securely and easily configure, poll and transmit flow measurement data—storing historical data directly in its hardware.

communication protocol. It was developed by Enron Corporation. The main differences between the two protocols is the numbering of the register addresses, the support of 32 bit registers as well as 16 bit, and the ability to transmit Event logs and Historical data. How is data stored in Enron Modbus? In Enron Modbus, there is a different table for each of the different data types. Information is stored in the Slave device in four ...

About Enron Modbus | Simply Modbus Software

SoftPLC Corporation adds Enron Modbus serial and ethernet drivers to their SoftPLC Programmable Automation Controllers. Enron Modbus is a modification to the standard Modbus communication protocol, used in process control devices such as chromatographs, flow computers, odorization systems, RTU's, and fire/gas alarm systems. SoftPLC's can be used as programmable protocol converters (gateways) between Enron Modbus devices and existing controllers, such as PLC's, DCS, and
