Guidelines For Designing Downdraft Gasifiers

Guidelines for designing downdraft gasifiers This section gives a general review of the design characteristics of an Imbert type downdraft gasifier on the basis of the Swedish experience. The design of an Imbert type downdraft gasifier is based on specific gasification rate, also called the hearth load G H. It is defined as the amount of

[MOBI] Guidelines For Designing Downdraft Gasifiers

Downdraft gasifiers can operate with chipped or pelletised solid fuels, fluidised beds require fairly consistently sized feedstocks, and feedstocks for entrained flow gasifiers generally need to be

ground or slurried, depending on the gasifier type. This places different demands on resources and GHG emissions for pre-treatment.

Gasifiers are classified mainly on the basis of their gas-solid contacting mode and gasifying medium. Based on the gas-solid contacting mode, gasifiers are broadly divided into three principal types (Table 6.1): (1) fixed or moving bed, (2) fluidized bed, and (3) entrained flow. Each is further subdivided into specific types as shown in Figure 6.1.
