Horizontal Property A Eye On Spain

Horizontal cells are the laterally interconnecting neurons having cell bodies in the inner nuclear layer of the retina of vertebrate eyes. They help integrate and regulate the input from multiple photoreceptor cells. Among their functions, horizontal cells are believed to be responsible for increasing contrast via lateral inhibition and adapting both to bright and dim light conditions. Horizontal cells provide inhibitory feedback to rod and cone photoreceptors. They are thought to be important f

Retina horizontal cell - Wikipedia

The horizontal field of the eyes is more than 180° (half circle). Hold your hands west and east of you ears and wapper them a bit while looking straight ahead. You will see them. If two eye have >180 than one eye has >180 minus the part shielded by the nose. So that depends on the nose, or more accurate, on its relative position to het respective eye.
