Car tuning is the modification of a car to optimise it for a different set of performance requirements from those it was originally designed to meet. Most commonly this is higher engine performance and dynamic handling characteristics but cars may also be altered to provide better fuel economy, or smoother response.Tuning is the improvement of a vehicle's overall performance in response to the ...

Car tuning - Wikipedia

Changing the tuning characteristics electronically, by changing the firmware of the EMS. This chip tuning often works because modern engines are designed to produce more power than required, which is then reduced by the EMS to make the engine operate smoothly over a wider RPM range, with low emissions. This is called de-tuning and produces long-lasting engines and the ability to increase power output later for facelift models.

Engine tuning - Wikipedia

Engine management ou've got to get fuelling and ignition (and boost) spot on, and on any modern car that's down to the engine management system. Any significant changes to the engine need adjustments to the management to get maximum power, drivability, and most importantly, reliability from your engine.
