To overcome this, a High Voltage DC (HVDC) transmission system is generally employed for high power transmission. At the end of the DC power system, DC power is inverted to the AC power and synchronizes with succeeding AC network. So the entire HVDC consists of three sections, namely converter station, transmission portion and an inverter station.

### High Voltage DC Transmission System - Electronics Hub

High-voltage DC (HVDC) transmission is considered advantageous and in some cases superior to AC in applications such as long underwater cable crossing, long-distance bulk power transmission, stable AC interconnection, inerties with low short-circuit levels, coupling 50/60 Hz systems, and long-distance underground cable systems [75–79].
