We address this shortcoming by analyzing economic impacts and impact dynamics of Bt cotton in India. Building on unique panel data collected between 2002 and 2008, and controlling for nonrandom selection bias in technology adoption, we show that Bt has caused a 24% increase in cotton yield per acre through reduced pest damage and a 50% gain in ...

The process of impact is dominated by the contact point with maximal potential energy, which is linked with the 'time-like' independent variable (Liu et al. 2008; Zhao et al. 2008). Similar to the contact dynamics, the tangential constraint at the instant of the relative tangential velocity vanishing

## **Our missions | Inria**

Since print quality is related to spreading of an ink drop when it impacts the substrate (Asai et al., 1993), impact dynamics is of central importance to inkjet printing. The parameter usually followed during impaction is the spreading ratio,  $D^* = D/d$ , where  $D$  is the contact diameter and  $d$  is the drop diameter before impact.

### **Our Missions | Inria**

ARIA project will lead to major advances in our capability and understanding of the nonlinear dynamics of unsteady multi-scale flows and related phenomena. The proposed research has the potential to impact our ability to model the nonlinear dynamics of a much wider range of complex phenomena, including, for instance, the dynamics of biological systems and the financial systems.

graduate and postgraduate students, and will work as a reference for engineers in the fields of solid mechanics, automotive design, aerospace, mechanical, nuclear, marine, and defense.

### **Introduction to Impact Dynamics | Wiley Online Books**

In mechanics, an impact is a high force or shock applied over a short time period when two or more bodies collide. Such a force or acceleration usually has a greater effect than a lower force applied over a proportionally longer period. The effect depends critically on the relative velocity of the bodies to one another.

We developed a multi-level model of the French COVID-19 epidemic at the regional level. We rely on a global extended Susceptible-Exposed-Infectious-Recovered (SEIR) mechanistic model as a simplified representation of the average epidemic process, with the addition of region specific random effects. Combining several French public datasets on the early dynamics of the epidemic, we estimate ...
