Emergency Medical Services

The laryngeal tube (also known as the King LT) is an airway management device designed as an alternative to other airway management techniques such as mask ventilation, laryngeal mask airway, and tracheal intubation. This device can be inserted blindly through the oropharynx into the hypopharynx to create an airway during anaesthesia and cardiopulmonary resuscitation so as to enable mechanical ...

Laryngeal tube - Wikipedia

The oropharyngeal airway (OPA) is a J-shaped device that fits over the tongue to hold the soft hypopharyngeal structures and the tongue away from the posterior wall of the pharynx. OPA is used in persons who are at risk for developing airway obstruction from the tongue or from relaxed upper airway muscle.

3 things EMS providers need to know about supraglottic airways

Airway Maneuvers. Head tilt/chin lift. The head tilt/chin lift is the basic maneuver for establishing an airway in someone without a cervical spine injury. By tilting the head back, the rescuer straightens the patient's airway from the lungs, through the pharynx, with only a slight curve at the mouth. The chin lift pulls the tongue out of the ...

A Review of Airways - ACLS Medical Training

Limitations to this pilot do not allow for specific comment on or validation of the efficacy of the King LT® as a first or second line airway tool. No digital end-tidal CO₂ monitoring was available; nearly all of the patients were critically ill or near dead and no patient follow-up was available for the few who survived to the ED.

A pilot study of the King LT supralaryngeal airway use in ...

Mouth-to-mouth, mouth-to-mask, and bag-mask ventilation are the usual alternatives rescuers could select between when waiting for an advance airway system, which comes in the form of a supraglottic airway, laryngeal mask airway, or endotracheal tube that can provide a more stable and better way of breathing for the patient and should be inserted as early as possible in an effort to resuscitate ...
