Lab Processes helps chemists, physicists, biologists and other scientists conduct a wide variety of tests and experiments. Laboratory technicians can manage processes and collaborate with other personnel to create, change, and dynamically distribute data flows using an iterative approach. It is very simple to add new custom processes and tasks.

Managing test results (blood tests and other tests) is a complex process that is critical for patient safety. Lab test errors are among the most frequent in primary care, and are also among the most likely to cascade to patient harm when they occur. (West 2009) Improving how test results are managed and communicated to patients can also help primary care practices achieve savings in staff time and can improve the quality of care they provide.
