Human evolution is the evolutionary process that led to the emergence of anatomically modern humans, beginning with the evolutionary history of primates—in particular genus Homo—and leading to the emergence of Homo sapiens as a distinct species of the hominid family, which includes the great apes. This process involved the gradual development of traits such as human bipedalism and language ...

### Human evolution - Wikipedia

Human evolution defined human evolution, the process by which human beings developed on Earth from now-extinct primates. Viewed zoologically, we humans are Homo sapiens, a culture-bearing, upright-walking species that lives on the ground and first evolved in Africa between 100,000 and 200,000 years ago.

In this live Grade 12 Life Sciences show we take a close look at Evolution. In this lesson we discuss the difference between a hypothesis & a theory. We summarise ideas on evolution & take a look at Lamarck's theory in more detail. Finally, we explain natural selection as an explanation for evolution.

### Evolution | Mindset Learn

From the discovery of the 'Taungs baby' in South Africa in 1924 and its subsequent description by Raymond Dart, to the 1979 announcements of the new species Australopithecus afarensis, the new hybrid primate siabon, the discoveries of 3.8 millionyearold fossil hominid footprints, and of the earliest known fossil anthropoids, there has been a steady progression of major finds, new interpretations, and revisions of man's thinking about his origins.

### grade 12 life sciences study guide - PDF Free Download

The human evolution story begins in Africa about 6 million years ago. Over 6 million years our ape-like ancestors evolved into upright walking, tool using and cultural modern humans, spreading out across the globe. There have been many different hominid species in the past, but only one - Homo sapiens sapiens - has been ultimately successful.

### Life Science PowerPoints

Human evolution - Human evolution - Hominin habitats: The section Background and beginnings in the Miocene describes certain global climatic changes that reduced forested areas and induced more open terrestrial biomes during the late Miocene Epoch (11.2-5.3 mya). During the succeeding Pliocene Epoch (5.3-2.6 mya) these changes only intensified.
