Hydraulic Structures: Fourth Edition

Hydraulic engineering as a sub-discipline of civil engineering is concerned with the flow and conveyance of fluids, principally water and sewage. One feature of these systems is the extensive use of gravity as the motive force to cause the movement of the fluids. This area of civil engineering is intimately related to the design of bridges, dams, channels, canals, and levees, and to both ...

Hydraulic Structures : P. Novak : 9780415386265

A hydraulic model offers itself as a powerful design tool which establishes a fluid system from the observations on which the performance of the prototype could be inferred. Models are the only recourse to the nearest approach to the solution of many hydraulic problems.
