While identifying the proper etiology of the wound is important for coding and tracking purposes, it is even more important as the driver of management and prognosis. Unless the underlying etiology is addressed or reversed, the wound will not heal. If the wound is from pressure, the pressure must be minimized or removed; or if the wound is from ...

Wounds treated with negative pressure wound therapy (NPWT) are not often straightforward. They occur in interesting places, have anything from slough to hardware visible in the bases, and have nooks and crannies that are not visible to the clinicians peering into the wound. A gentle probe is necessary during wound assessment to identify tunnels and undermined areas.
