The three analysis techniques that are used in conjunction with each other for object-oriented analysis are object modelling, dynamic modelling, and functional modelling.

Object Modelling
Object modelling develops the static structure of the software system in terms of objects.

Principles of Object-Oriented Systems. The conceptual framework of object-oriented systems is based upon the object model.

There are two categories of elements in an object-oriented system – Major Elements – By major, it is meant that if a model does not have any one of these elements, it ceases to be object oriented. The
