A two-stroke engine is a type of internal combustion engine that completes a power cycle with two strokes of the piston during only one crankshaft revolution. This is in contrast to a "four-stroke engine", which requires four strokes of the piston to complete a power cycle during two crankshaft revolutions. In a two-stroke engine, the end of the combustion stroke and the beginning of the compression stroke happen simultaneously, with the intake and exhaust functions occurring at the same

Like other types of engines, a two-stroke engine has a crankcase that surrounds and protects all other parts of the engine. Inside, it has a crankshaft, connecting rod and single piston. It's also got an intake port, a reed valve, an exhaust port, and a cylinder---all in addition to the combustion chamber, where the power is produced that moves whatever the engine is powering.
