In their Guidelines to Test Use, the International Test Commission (ITC) describes the areas covered by tests and testing as follows: 1. Testing includes a wide range of procedures for use in psychological, occupational and educational assessment. 2.

Psychological testing: A user's guide

Psychological evaluations serve the same purpose. Psychologists use tests and other assessment tools to measure and observe a client's behavior to arrive at a diagnosis and guide treatment. Psychologists administer tests and assessments for a wide variety of reasons.

Understanding psychological testing and assessment

The main purpose of psychological testing is to gain a better understanding of a person and her/his behavior. The goals of psychological assessment are to better understand a person's strengths and weaknesses, identify potential problems with cognitions, emotional reactivity, and make recommendations for treatment/remediation.

Psychological Tests & Assessments: What You Need to Know

This guide focuses on the use of psychological tests for research in healthcare settings. It extends the original Principles for the Use of Published Psychological Tests in Research (see above) by considering the impact of the testing process and research data on individual participants, services and service users. It encourages people in healthcare research to take into account the ethical, administration, scoring, feedback and security aspects of responsible test use.

Guidelines on test use | PTC - British Psychological Society

Psychological tests are also important tools for conducting psychological research. In this book our focus is on the former rather than the latter application. The ability to select, administer, score and interpret psychological tests is considered a core skill for professional psychologists (Australian Psychology Accreditation Council, 2010).

Psychological Tests: What are They and Why Do We need Them? 1

APA's Guidelines for Test User Qualifications: Executive Summary. Statement on the Use of Secure Psychological Tests in the Education of Graduate and Undergraduate Psychology Students. Still can't find what you're looking for? Contact the Testing Office of the APA Science Directorate at (202) 336-6000 or via email.

Testing and Assessment - American Psychological Association

Qualification Level B. Tests may be purchased by individuals with: A master's degree in psychology, education, speech language pathology, occupational therapy, social work, counseling, or in a field closely related to the intended use of the assessment, and formal training in the ethical administration, scoring, and interpretation of clinical assessments.

Qualifications Policy - Pearson Assessments

Pearson publishes a wide variety of tests for all kinds of users—tests that may be administered by paraprofessionals or by educational specialists with differing backgrounds in assessments, and tests that require an advanced level of training to administer and interpret the test results. Some tests, such as intelligence tests, are restricted to individuals with specific training.

Qualification Levels

The guidelines define a psychological test as any measurement procedure for assessing psychological characteristics in which a sample of an examinee's behavior is obtained and subsequently evaluated and scored using a standardized process.

APA's Guidelines for Test User Qualifications

This classic, authoritative introduction to psychological testing is widely hailed for its broad coverage and ability to cover "graduate school" topics in terms that college freshmen can understand. It familiarizes students with the basics of test construction and prepares them to effectively evaluate different tests, choose tests for particular purposes and individual examines, and interpret scores properly.
