Tetra Pak Dairy Index report: facts, figures and trends

Welcome to the 12th issue of the Tetra Pak Index, which focuses on health and the environment. Historically seen as two separate areas, we're now seeing them converge within food and beverage, which is perhaps the first industry to see this trend. This report explores the drivers of this new trend, and the opportunities it presents for brands going forward.

A Global Balancing Act: Dairy Supply and Demand - Tetra Pak

Shearing. In rheology, shearing of a substance is the key to knowledge of flow behaviour and structure. A sheared flow is achieved through flow between parallel planes, rotational flow between coaxial cylinders where one cylinder is stationary and the other one is rotating, telescopic flow through capillaries and pipes, and torsional flow between parallel plates.

RHEOLOGY | Dairy Processing Handbook

Homogenization theories. Many theories of the mechanism of high pressure homogenization have been presented over the years. For a low-viscous oil-in-water dispersion like milk, where most of the droplets are in the order of one μm (10⁻⁶ m) in diameter, two theories have survived. Together, they give a good explanation of the influence of different parameters on the homogenizing effect.

Homogenizers | Dairy Processing Handbook

The latest Dairy Index from Tetra Pak, which tracks facts and figures in the global dairy industry, has found that total global demand for milk is set to overtake the available supply with a persistent gap over the next decade.

A Global Balancing Act: Dairy Supply and Demand

Recombined modified milk and milk products are products made from dairy-product ingredients with compositions other than normal dairy products, e.g. flavoured products, butter from fractionated fat, or dietary evaporated or condensed milk.
