Horticulture is the field of study which concentrates on gardening, and the plants and biological systems which make up a garden. Horticulture is a broad science which has many sub-disciplines. Horticulture studies both the science behind the garden and the aesthetics which make it appealing to look at. For instance, floriculture focuses on the production of flowers, while viticulture studies purely grapes.

### Horticulture - Biology Dictionary

About the Author John E. Preece and Paul E. Read are the authors of The Biology of Horticulture: An Introductory Textbook, 2nd Edition, published by Wiley.

### The Biology of Horticulture: An Introductory Textbook ...

Horticulture is divided into the cultivation of plants for food ( pomology and olericulture) and plants for ornament ( floriculture and landscape horticulture ). Pomology deals with fruit and nut crops. Olericulture deals with herbaceous plants for the kitchen, including, for example, carrots (edible root), asparagus (edible stem), lettuce (edible leaf), cauliflower (edible flower buds), tomatoes (edible fruit), and peas (edible seed).
