most concerns them is food. Food, particularly dietary lipids, is claimed to be the 'driving force' in the evolution of animal form especially that of the brain, vascular system and the skeleton.

The fats of evolution | New Scientist

This transition underlies the expensive tissue hypothesis (Suburu 2013), which links changes in diet to evolution of the human brain. The hypothesis is that the brain and gut tissue both require lots of energy, so as our brains became larger, the gut size became smaller.
