### The Hubbard Brook Experimental Forest

Established in 1955 by the USDA Forest Service, the Hubbard Brook Experimental Forest is a 7,800-acre northern hardwood forest situated within the White Mountain National Forest in New Hampshire. It is home to the Hubbard Brook Ecosystem Study, which was founded in 1963 and is one of the longest running and most comprehensive ecosystem studies in the world.

### Welcome to the Hubbard Brook Ecosystem Study | Hubbard Brook

The Hubbard Brook Experimental Forest was established in 1955 as a major center for hydrologic research in New England. Located in the White Mountain National Forest in central New Hampshire, the 3,138-ha bowlshaped Hubbard Brook Valley has hilly terrain, ranging in elevation from 222 to 1,015 m. The Hubbard Brook Ecosystem Study was established by a cooperative agreement in 1963.

### Hubbard Brook Experimental Forest - Northern Research ...

Hubbard Brook Experimental Forest is an area of land in the towns of Woodstock and Thornton in the White Mountains of New Hampshire that functions as an outdoor laboratory for ecological studies. It was initially established in 1955 by the United States Forest Service for the study of the relationship between forest cover and water quality and supply.

### Hubbard Brook Experimental Forest - Wikipedia

The Hubbard Brook Experimental Forest, a site of intensive long-term ecological research, is in the headwaters of the Merrimack. The Merrimack's water is clear and soft. The Merrimack was so heavily impounded (there are more than 500 dams in its basin) that it was called "America's hardest working river."

The Hubbard Brook Experimental Forest (HBEF) is home to one of the world's most influential long-term ecological study sites. Located within the White Mountain National Forest in central New Hampshire, this 7,800-acre forested site was established by the USDA Forest Service in 1955 as a center for hydrologic research in New England.

### The Hubbard Brook Experimental Forest - WaterViz

The Hubbard Brook Experimental Forest is an area where scientists have collected ecological data for many years. It is located in the White Mountains of New Hampshire. Data collected in this forest helps uncover environmental trends over long periods of time, such as changes in air temperature, precipitation, forest growth, and animal populations.

### The birds of Hubbard Brook, Part I | Data Nuggets

Recent research performed with precipitation data from the Hubbard Brook Experimental Forest, a 3,160 hectare reserve in the White Mountain National Forest, suggests that in high precipitation events with a southerly low-level wind flow, the precipitation maxima is located in the valley – contrary to theory and observations in most other places.

### Orographic Impact on Precipitation Amount in Hubbard Brook ...

To determine the effect of this increased acidity on the ecology of aquatic ecosystems, dilute concentrations of sulfuric acid were added to Norris Brook, a stream in the Hubbard Brook Experimental Forest, West Thornton, New Hampshire, USA. The stream was maintained at pH 4 from April to September 1977.

### Experimental Acidification of a Stream in the Hubbard ...

Researchers at the HJ Andrews Experimental Forest in Oregon have created a new computer technology to listen to multiple bird sounds at one time, to identify which species are present and how they may be changing as a result of habitat loss or climate change.

### Welcome to Smart Forests! | Smart Forests

The Hubbard Brook Experimental Forest (HBEF) is covered by northern hardwoods and contains a network of streams which are ideal for watershed research. In 1988 the HBEF was designated as a Long Term Ecological Research (LTER) site by the National Science Foundation.

Hubbard Brook Experimental Forest (HBEF) was established in 1955 as a major center for hydrologic research in New England. The site is located within the boundaries of the White Mountain National Forest in central New Hampshire. The 3,138-ha, bowl-shaped Valley has hilly terrain, ranging from 222 to 1,015 m altitude.

### Hubbard Brook Experimental Forest

Smithsonian Migratory Bird Center researchers have studied black-throated blue warblers at the Hubbard Brook Experimental Forest in New Hampshire for decades. This forest was set aside by the United States Forest Service in 1963 to serve as a laboratory for ecological research, allowing scientists to study the air, water, soil, plants and animals that make up a forest ecosystem.
